

HSB News Brief

In January, HSB International Inc. completed a Tissue Machine Global Project for Interlake Paper in Ontario, Canada.

HSB carried out the engineering and design for system modifications on a tissue machine. Modifications included reconfiguring the sheet run, modifying the tail threading system, adjusting the dust extraction, assistance with the installation of state of the art water jet slitters, scanner relocation and a completely new trim handling system depositing the trim to three different pulpers.

The project was part of the papermakers overall system and quality upgrade of their kitchen towelling, completed in conjunction with the installation of the new water jet slitting system.

Congratulations to our great team for the good work and a warm thank you to our client and their group!
