

Floor Sweep Systems

Are you interested in adding a Floor Sweep System to your existing converting machine or rewinder?

We can supply you with two types of systems:

System No. 1

Floor mounted dust collection hoods.

System No. 2

Drive side dust collection points.

All our Floor Sweep Systems are designed to fit and operate effectively with your existing Dust Collection System(s).

Modifications and the addition of Floor Sweep Systems is possible when one Dust Collection System services both one production or converting line or several lines.

If you are interested in improving your Dust Collection System effectiveness and reducing operating costs, please do not hesitate to contact us. HSB looks forward to discussing with you how we can work together to integrate these systems in a most effective and cost efficient manner.
